This new addition to the BSAVA Foundation Manual series serves to provide an easily accessible source of practical advice on the management of common feline problems encountered in first-opinion practice. It begins with an introduction to important general issues in effective feline practice, including handling techniques, principles of examination and how to ensure a cat-friendly practice. Gold-standard preventive healthcare guidelines focusing on a life-stage approach and a discussion on therapeutics including antibiotic use, analgesia and anaesthesia follow. The main part of the Manual comprises problem-oriented sections that focus on the investigation and initial management of, first, emergencies and then other common presentations such as alopecia, polydipsia and seizures. The final systems-based section gives more detailed information on the management of the disorders commonly seen in general practice. The Manual gives enough information for any vet to deal very competently with commonly seen feline problems, also providing guidance on where to go for further information if required. Where appropriate, guidelines are also given for when referral should be considered, and for situations where financial limitations may exist. A unique feature of this Manual are the many 'Quick Reference Guides' (QRGs) provided throughout , which present practical techniques and treatments in easy-to-follow step-by-step guides, with clear colour photographs illustrating each step whenever possible. The international panel of authors were carefully chosen for their practical expertise and passion in different areas of feline practice. The practical and easy-to-follow advice provided in this Manual makes it essential reading for all new graduates and first-opinion vets who see feline cases, as well as veterinary students and veterinary nurses worldwide.

This is a foundation level manual in the popular series from the BSAVA. It presents the basic principles upon which the practice of modern veterinary surgery is based. The principles of surgery will often dictate the outcome of a surgical procedure, more so than the use of the most up-to-date technique, and the surgeon ignores them at their peril. The BSAVA Manual of Surgical Principles presents a solid grounding in the basic principles, with practical examples of why they are important, creating a manual that is very readable and relevant for the veterinary surgeon in practice.

The importance of animal behavior and psychological well-being is increasingly being recognized in the veterinary profession. This new edition is designed to be even more practical and user-friendly than the first. For a range of behavioral presentations, consideration is given to evaluation of the patient, including any possible underlying disease; evaluation of client attitudes, beliefs and behavior; risk evaluation; behavioral biology of the condition; acute management protocols; long-term treatment strategies; prognosis; follow-up; and preventive measures. A special chapter on shelter animals has been added, as this is an area where veterinary support is increasingly sought in both health and husbandry. An included CD offers client handouts, history-taking forms, detailed behavioral questionnaires for each species and a referral form.

Dermatology constitutes a large percentage of the daily caseload in small animal practice and can represent a challenge for the busy practitioner, as many different diseases have similar presenting signs. For this reason, a structured understanding of how to approach a dermatological case is essential for a successful outcome. The 4th edition of the BSAVA Manual of Canine and Feline Dermatology has been completely updated, chapters have been expanded and structurally divided to include the management of specific diseases and common dermatological cases, such as ectoparasite infestation and its treatment and prophylaxis, atopic dermatitis and its management, superficial and deep pyoderma and their treatment, feline-specific conditions and their management, autoimmune and immune-mediated diseases and a targeted management, etc. New chapters have also been added to this new edition, such topical treatments, nutrients of the skin and regional dermatoses. The manual begins by providing the reader with a grounding in examination and investigative techniques, including a new chapter on cytology. The second section focuses on a problem-oriented approach to common dermatological conditions and their management. The final part of the manual covers the major skin diseases of dogs and cats.

Edited by John M. Williams and Jacqui D. Niles From routine ovariohysterectomies to emergency abdominal drainage for acute peritonitis, abdominal surgery is an essential topic in general small animal practise. Extensively revised and updated, with new chapters on laparoscopic surgery and urinary incontinence, the new edition of the BSAVA Manual of Canine and Feline Abdominal Surgery provides a ready source of practical information for veterinary surgeons, students, nurses and technicians. The Manual includes detailed surgical procedures, laid out in step-by-step Operative Techniques in an easy to follow and practical way, with notes on patient positioning and preparation, instrumentation and postoperative management. This unique book, written by specialists from the UK, the USA, Canada, Australia and South Africa, bridges the disciplines of clinical pathology, internal medicine and critical care in a single volume. The Manual is divided into three sections: haematology, haemostasis and transfusion medicine. Within each section, review chapters are augmented by contributions on selected topics of interest to the practitioner. Methods of sample collection and interpretation for routine haematology, haemostatic function and bone marrow analysis are reviewed and new developments, such as flow cytometry for typing leukemias, outlined. The diagnosis and management of a range of major infectious, immune-mediated and neoplastic diseases of the haematopoietic system are discussed. A chapter on canine babesiosis is timely, given the recent reports of cases in the UK, and a chapter is also included on the feline pathogen Haemobartonella felis. A wealth of excellent colour photographs throughout the book illustrates cell types and abnormalities, plus techniques such as blood transfusion. The range of coverage and the practical information in this Manual will render it of great value in the practice setting. The manual has been written with the veterinary surgeon in general practice in mind and it aims to offer both sound scientific information and practical easy-to-follow advice. Following a consideration of the role of behavioural medicine within the veterinary practice, the normal behaviours of cats and dogs are described. Some more theoretical chapters are included, to give a background understanding of learning theory, the physiology of fear, and types of aggression. But the major focus of the Manual is on the practical approach to history taking, diagnosis, treatment and prognosis, and follow-up of the range of behavioural problems encountered in dogs and cats. Colour photographs and specially commissioned drawings illustrate important features such as body postures, and tables throughout help the reader to access important information quickly.
