Clubbing has been described as a bulbous fusiform enlargement of the distal portion of a digit. It is commonly bilateral but may be unilateral and can affect a single digit. Both fingers and toes can be affected. As clubbing progresses, the angle between the nail and the nail base (called the Lovibond angle) becomes obliterated. Normally, the angle is less than or equal to 160°. With ...

Clubbing | Doctor | Patient

Nail clubbing, also known as digital clubbing or clubbing, is a deformity of the finger or toe nails associated with a number of diseases, mostly of the heart and lungs. CLUBBING | meaning in the Cambridge English Dictionary

Clubbing refers to swelling in the tip of the digit that results in loss of the normal angle seen between the nail and the nail bed. The fingertips appear broader and rounder when clubbing is present. While the exact mechanism that leads to clubbing is poorly understood, it is known to develop most often in people with conditions of the heart or

Clubbing: Symptoms, Signs, Causes & Treatment

Primary clubbing is hereditary, and it is passed down via genes. Hereditary clubbing is simply a physical feature, like the color of your eyes or your height. Several genes have been associated with primary clubbing, including the HPGD gene and the SLC02A1 gene. Secondary clubbing occurs as one of the effects of chronic lung and heart disease. Lung cancer is the most common cause of ...
