Educators and education policy has increasingly acknowledged the value of creativity and creative approaches to education in particular. This book highlights a range of innovative teaching techniques successfully employed by teachers from a range of disciplines and education levels in order to share knowledge regarding creative education.

This book advances an environmental approach to enhancing creativity in schools, by interweaving educational creativity theory with creative industries environmental approaches. Using Anna Craft 's last book *Creativity and Education Futures* as a starting point, the book sets out an up-to-date argument for why education policy should be supporting a birth-to-workplace approach to developing creative skills and capacities that extends across the education lifespan. The book also draws on the voices of school teachers, students and leaders who suggest directions for the next generation of creative teachers and learners in a rapidly evolving global education landscape. Overall, the book argues that secondary schools must find a way to make more room for creative risk, innovation and imagination in order to adequately prepare students for creative workplaces and publics.

A rounded, comprehensive, guide to issues of practice, pedagogy and policy concerned with creative education.

This book examines the gaps in creativity education across the education lifespan and the resulting implications for creative education and economic policy. Building on cutting-edge international research, the editors and contributors explore innovations in interdisciplinary creativities, including STEM agendas and definitions, science and creativity and organisational creativity amongst other subjects. Central to the volume is the idea that good creative educational practice and policy advancement needs to reimagine individual contribution and possibilities, whilst resisting standardization: it is inherently risky, not risk-averse. Prioritising creative partnerships, zones of contact, practice encounters and creative ecologies signal new modes of participatory engagement. Unfortunately, while primary schools continue to construct environments conducive to this kind of 'slow education', secondary schools and education policy persistently do not. This book argues, from diverse viewpoints and methodological perspectives, that 21st-century creativity education must find a way to advance in a more integrated and less siloed manner in order to respond to pedagogical innovation, economic imperatives and creative possibilities, and adequately prepare students for creative practice, workplaces and publics. This innovative volume will appeal to students and scholars of creative practice as well as policy makers and practitioners.

As interest in creativity explodes, it has become more complicated to decide how to best nurture creativity in our schools. There are the controversial Common Core Standards in many states. Meanwhile, the classroom has become increasingly digital; it is easier to access information, communicate ideas, and learn from people across the world. Many countries now include cultivating creativity as a national educational policy recommendation, yet there is still debate over best practices. Indeed, many well-intentioned educators may institute programs that may not reach the desired outcome. The notion that schools 'kill creativity' has become a widespread social meme. We view such beliefs as both hyperbolic and problematic: they allow us to recognize there is a problem but not solve it. In this book, a wide array of international experts addresses these issues, discussing theories and research that focus on how to nurture creativity in K-12 and college-level classrooms.

Creative teaching as well as teaching creativity are cutting edge issues in psychology today as recent academic and popular media coverage has shown. This volume expands on that interest with chapter authors drawn from interdisciplinary areas. It includes examples of creatively teaching across the education system, including preschool, K-12, undergraduate, and graduate level education. The variety of subjects covered by the chapters include psychology, math, science, and reading. In addition to creative teaching which may lead to enhanced learning and achievement in students, as well enhanced creativity, another focus is teaching with the objective to enhance creativity.
