## Forex Trading Using Volume Price

The volume measurement in the Forex market is looking at how much price moves within a certain period and it does not care how many or few buying and selling transactions are in fact needed to make that price move 1 tick. All it knows is how many ticks it moved, regardless of the fact if 100 trades were involved or 10,000.

[Click here for more details](#) Forex Trading Using Volume Price Analysis. For many traders, price and the price chart itself are the beginning and the end of technical analysis. All they consider is the price and nothing else. However, for myself, and many others, this approach completely ignores the extension of price to its logical association with volume, which together reveals the market's true intent, and whether a move is genuine or fake.

## Tracking Forex using the Price and Volume Trend Indicator

Volume-price trend (VPT), sometimes known as price-volume trend, combines price and volume in the market to form a hybrid trading indicator of the two variables. The basic idea behind the indicator is to multiply the market's volume by the percentage change in the price over a given interval (usually daily). If price declines, the indicator's value goes lower due to the negative value.
