*How Educational Ideologies Are Shaping Global Society* ...

In this book Joel Spring explores three major international educational ideologies that are shaping global society: neo-liberal educational ideology, human rights education, and environmentalism. Neo-liberal ideology reflects a rethinking of nationalist forms of education as the nation-state slowly erodes under the power of a growing global civil society. Traditional nationalist education attempts to mold loyal and patriotic citizens who are emotionally attached to symbols of the state, whereas the goal of neo-liberal educational ideology is to change nationalist education to serve the needs of the global economy. These changes are fueling a clash between the ideas of free-market and consumer-based neo-liberals and those of human rights and environmental educators. Human rights education is concerned with creating activist global citizens. It is rooted in the idea that inherent in human rights doctrines is a collective responsibility to ensure the rights of all people. Environmentalism is the most radical of the ideologies because it rejects the industrial and consumerist paradigm that has dominated most economic thought, including capitalism and communism. Spring synthesizes and analyzes the effect of these educational ideologies on shaping the future of the global society. In the concluding section, he compares the effect of these ideologies on global society with the possibility of a world divided between conflicting civilizations. *How Educational Ideologies Are Shaping Global Society: Intergovernmental Organizations, NGOs, and the Decline of the Nation-State* features: \*a critical exploration of the transition of schooling from a function of the nation-state to a globalized economic and political system; \*a discussion of the major organizations and trading blocs shaping the future globalization of educational policies; \*an analysis of the major competing global ideologies of education--including national and corporate models that emphasize training workers for a competitive global free market; the worldwide network of human rights and peace educators who are teaching a global set of ethics; and the environmental movement's efforts to create a common set of educational standards for sustainable development and sustainable consumption; and \*an exploration of the possible future of global educational policy and school organizations. By integrating a wide range of previously scattered information within a bold new framework for understanding educational ideologies and their impact on the global society, Spring raises important questions for researchers, professionals, and students in history and philosophy of education, educational policy, educational studies, comparative education, multicultural education, curriculum studies, critical media studies, global studies, human rights education, and related areas.

Ideologies in Educational Administration and Leadership explores ideological dimensions of educational administration in a number of Western and Central European contexts as they influence or shape the understanding, analysis, and practice in the field covering a broad range of topics, such as ethics, governance, diversity, and power. The first section, Philosophical and Theoretical Foundations, includes a range of sociological, political and linguistic approaches to examining ideology in an educational context. The second section, Ideologies of Research and Teaching, includes examinations of neoliberal and technological effects on research and teaching, as well as ideological shifts and challenges, in the West and in Eastern Europe. The last section, Contemporary and International Issues, includes critiques of social media, neoliberal impact on schooling, managerial leadership, university ideologies in Finland, the rationalisation of universities, and the impact of administrative ideologies on school systems. The book will appeal to researchers, practitioners, policy-makers, academics, as well as post-graduates in educational administration theory, and related courses in the ethics and politics of education, educational leadership, and organisational studies.

This volume—a major new contribution to Joel Spring’s reportage and analysis of the intersection of global forces and education—offers a new paradigm for global school systems. Education for global economic competition is the prevailing goal of most national school systems. Spring argues that recent international studies by economists, social psychologists, and others on the social factors that support subjective well-being and longevity should serve as a call to arms to change education policy; the current industrial-consumer paradigm is not supportive of either happiness or long life. Building his argument through an original documentation, synthesis, and critique of prevailing global economic goals for schools and research on social conditions that support happiness and long life, Spring: \*develops guidelines for a global core curriculum, methods of instruction, and school organizations; \*translates these guidelines into a new paradigm for global school systems based on progressive, human rights, and environmental educational traditions; \*contrasts differing ways of seeing and knowing among indigenous, Western, and Confucian-based societies, concluding that global teaching and learning involve a particular form of holistic knowing and seeing; and \*proposes a prototype for a global school—an eco-school that functions to protect the biosphere and human rights and to support the happiness and well-being of the school staff, students, and immediate community—and for a global core curriculum based on holistic models for lessons and instruction. The book concludes with Spring’s retelling of Plato’s parable of the cave—in which educators break the chains that bind them to the industrial-consumer paradigm and rethink their commitment to humanity’s welfare.

This book sets out to examine the neo-liberal dimensions of globalisation and market-driven economic imperatives that have impacted higher education reforms. It critiques the notions of accountability, efficiency, academic capitalism, quality of education, and the market-oriented and entrepreneurial university model, based on a neo-liberal ideology. The expansion of economic rationality into the educational sector is one the most ubiquitous dimensions of neo-liberalism and one of its most powerful ideological tools, resulting in the commodification, commercialization, and marketization of education and knowledge. The book critiques structural changes in education and the impact of neo-liberalism and globalisation on educational systems around the world. With this as its overall focus, the respective chapters present hand-picked scholarly research on major discourses in the field of global neo-liberal education reforms. The book draws upon recent studies in the areas of globalisation, neo-liberal education reforms, and the role of the state. It critically assesses the neo-liberal ideological imperatives of current education and policy reforms and illustrates how these shifts in the relationship between the state and education policy are shaping current trends in education policy reform outcomes. Taken together, the chapters offer a timely analysis of current issues affecting neo-liberal education policy research, and outline future directions that education and policy reforms could take.

Joel Spring’s *American Education* provides a clear, concise introduction to the historical, political, social, and legal foundations of education and to the profession of teaching in the United States. Students will come away with a strong knowledge of the forces behind the shaping of the American educational system through connecting with the latest topics, issues, and data.

Human beings have the possibility to give meaning to their lives and to create coherence in experiences. Present-day humanism strongly focuses on personal development in relation to others. It is this tension between personal development and advancement of humanization, that is creating the opportunities for the personal development of every world citizen. Humanism is about personal autonomy, moral responsibility, and about solidarity with humanity. The tension between autonomy and social involvement is the core of humanism. Education can support persons in their moral and personal identity development. The authors brought together in this book all address issues of developing autonomy and humanity in educational practices. All the chapters try to link theory and practice. They either make theoretical ideas more practical or they use practical experiences and concerns to rethink theoretical notions. Together the chapters in the book give a broad overview of theoretical foundations, concrete research, and practices in education. The book shows a diversity that can inspire scholars and practitioners in further developing their perspectives. Creating meaning is an essential part of all education. Focusing on the linking of autonomy and humanity is the humanist perspective in it.
