IEEE 693 | TRU Compliance

Overall, IEEE 693-2018 provides minimum guidelines for the seismic design of substations and the seismic qualification of equipment, with an emphasis on electrical equipment and its anchorage. For the ease of the user, the standard features a section on the document's instructions. IEEE 693-2018 is a revision of IEEE 693-2005.

IEEE 693 (Institute of Electrical and Electronics Engineers) is the most common standard for seismic qualification requirements of high-voltage substation equipment worldwide. A qualification by shake-table testing is technically the best way to ensure the structural integrity and the continuous functionality of a component.

Composites For Seismic performance there are two industry standards that can be used; IEEE 693-2005 Annex D and IEC TS 61463. IEEE 693-2005 is the recognized industry standard worldwide and is generally the one selected to qualify equipment. When comparing the two standards (IEEE vs IEC Comparison Table) it can be concluded that the IEEE 693-2005 Annex D High Performance time history shake table testing is the more stringent test for qualifying transformer ...

IEEE-693 is a document that primarily directs the design and qualification of equipment installed in substations and its ability to withstand a seismic event. Substation equipment can be qualified by doing static analysis, dynamic analysis, or shake table testing depending upon the type of equipment and voltage rating.
