This book provides a clear overview of current thinking on the teaching and learning of geography. It is an ideal companion to all students beginning a career in teaching the subject in secondary schools. The chapters are written by experienced teacher educators and bridge both theory and practice. The writers focus on the continuities, whilst setting them in the context of the changing curriculum. The book is divided into four parts. Part One examines the historical context of geography teaching. Part Two looks at issues of course planning, design, syllabuses and programmes of study. Underlying this section is the assumption that geography should not be considered in isolation from other subjects, but rather as part of a whole curriculum. Part Three concentrates on teaching and learning, and includes chapters on the use of maps, field work, IT and first hand experience within a community. The final section covers the issues associated with assessment, across the whole school age range.

This supplemental text is an historical account of the beginning years of the social studies. Using the 1916 Social Studies report as a base, the book outlines the issues, contexts, and individuals that were influential in the genesis of the seminal social studies prototype program. The author explains that many of our present interests such as critical thinking, decision making, inquiry, reflective thinking, foundational studies, and cultural literacy can be found within the texts of the 1916 social studies program. Saxe also shows that the roots of the social studies program are found in the social sciences and not the traditional history curriculum. Included are chronological time lines that serve to illustrate the growth of the social studies, as well as an extensive bibliography of the primary foundational works of the social studies, including the 1916 report. These materials greatly enhance the value of Saxe[']s work for social studies educators and students.

Calls for renewed moral education in America's schools, offering dozens of programs schools can adopt to teach students respect, responsibility, hard work, and other values that should not be left to parents to teach.

The second edition of this well-received text on principles of geographic information systems (GIS) continues the author's style of "straight talk" in its presentation. The writing is accessible and easy to follow. Unlike most other texts, this book covers GIS design and modeling, reflecting the author's belief that modeling and analysis are at the heart of GIS. This enables students to understand how to use a GIS and what it does.

As religious polarisation in society deepens, political actors and policy-makers have begun to struggle with questions on the role of the dominant religion and how religion influences constitutional commitments and development. By focusing on Indonesia, Malaysia and Sri Lanka, Constitutions, Religion and Politics in Asia demonstrates how constitution-making and the operation of constitutional arrangements involving religion cannot be separated from the broader political dynamics of society. Although constitutions establish legal and political structures of government institutions and provide tools for rights protection, they do not operate in a vacuum divorced from the games of power and the political realities surrounding them. Here, Shah sets out how constitutions operate and evolve and demonstrates how constitutional provisions can produce unintended consequences over time. A vital new source of scholarship for students and scholars of law and religion and comparative constitutional law, and those interested in issues of constitutionalism and legal and political history in Asia.
