Perceptual-Motor Activities for Children: An Evidence-Based Guide to Building Physical and Cognitive Skillscontains 200 station activities that you can use to develop perceptual-motor skills in kids from preschool through elementary grades. The activities can be used in a 32-week sequential program or individually. You also receive a web resource that offers activity cards, bonus activities, active learning cards, audio tracks, a record sheet, and other tools.

The year's program consists of 25 weekly perceptual-motor lessons designed for students in preschool, kindergarten, first to third grade and special education classes.

"Developing Ocular Motor and Visual Perceptual Skills contains daily lesson plans and practical tips on how to successfully start an activities program. Other helpful features include a glossary of terms and a reference list of individuals and organizations that work with learning disabled children to develop these skills. The first of its kind, Developing Ocular Motor and Visual Perceptual Skills utilizes a learning approach by linking the theories with the remediation activities to help learning disabled children improve their perceptual and fine motor skills. All professionals looking to assess and enhance a variety of fine motor and visual perception deficiencies will welcome this workbook into their practices" -- Publisher description.

Motor skills are a vital part of healthy development and are featured prominently both in physical examinations and in parents' baby diaries. It has been known for a long time that motor development is critical for children's understanding of the physical and social world. Learning occurs through dynamic interactions and exchanges with the physical and the social world, and consequently movements of eyes and head, arms and legs, and the entire body are a critical during learning. At birth, we start with relatively poorly developed motor skills but soon gain eye and head control, learn to reach, grasp, sit, and eventually to crawl and walk on our own. The opportunities arising from each of these motor milestones are profound and open new and exciting possibilities for exploration and interactions, and learning. Consequently, several theoretical accounts of child development suggest that growth in cognitive, social, and perceptual domains are influenced by infants' own motor experiences. Recently, empirical studies have started to unravel the direct impact that motor skills may have other domains of development. This volume is part of this renewed interest and includes reviews of previous findings and recent empirical evidence for associations between the motor domain and other domains from leading researchers in the field of child development. We hope that these articles will stimulate further research on this interesting question.

Life Span Motor Development, Fifth Edition, is the only introductory textbook to use the model of constraints approach in discussing reasons for changes in movement throughout the life span. This fully updated edition presents the principles of motor development in an accessible manner for readers with minimal movement science background.

Offers a thoroughly revised, comprehensive A to Z compilation of authoritative information on the education of those with special needs.

Version:1.0 StartHTML:0000000226 EndHTML:0000006491 StartFragment:0000003066 EndFragment:0000006455 SourceURL:file:///localhost/Users/rhodaperhardt/Documents/Business&20docs/Publications/VPW&20book/VPWBookDescription.doc This 2012 spiral-bound book is specifically designed for children with learning disorders, 4 to 14 years old, featuring more than 800 activities and 187 illustrations on 160 pages of tasks and games that are developmentally-sequenced to promote learning and insure success.
