In the last decade a new wave of urban research has emerged, putting comparative perspectives back on the urban studies agenda.

However, this research is frequently based on similar case studies on a few selected cities in America and Europe and all too often focus on the abstract city level with marginal attention given to particular local contexts. Moving away from loosely defined urban theories and contexts, this book argues it is time to start learning from and compare across different "contested cities". It questions the long-standing Euro-centric academic knowledge production that is prevalent in urban studies and planning research. This book brings together a diverse range of international case studies from Latin America, South and South East Asia, Eastern Europe, Africa and the Middle East to offer an in-depth understanding of the worldwide contested nature of cities in a wide range of local contexts. It suggests an urban ontology that moves beyond the urban "West" and "North" as well as adding a comparative-relational understanding of the contested nature that "Southern" cities are developing. This timely contribution is essential reading for those working in the fields of human geography, urban studies, planning, politics, area studies and sociology.

Controlling national borders has once again become a key concern of contemporary states and a highly contentious issue in social and political life. But controlling borders is about much more than patrolling territorial boundaries at the edges of states: it now comprises a multitude of practices that take place at different levels, some at the edges of states and some in the local contexts of everyday life - in workplaces, in hospitals, in schools - which, taken together, construct, reproduce and contest borders and the rights and obligations associated with belonging to a nation-state. This book is a systematic exploration of the practices and processes that now define state bordering and the role it plays in national and global governance. Based on original research, it goes well beyond traditional approaches to the study of migration and racism, showing how these processes affect all members of society, not just the marginalized others. The uncertainties arising from these processes mean that more and more people find themselves living in grey zones, excluded from any form of protection and often denied basic human rights.

The interactions of humans with their changing environment is the main objective of the study of human geography. The interests of geographers range widely, but their perspective addresses the significance of place, spatiality, and landscape as the settings in which humans live. This outstanding reference work is the most comprehensive, up-to-date, and in-depth coverage of the discipline. Its sources are authoritative and international, and represent a critical overview of the range of issues that human geographers address, of the methods they use in their research, and of the relevance of human geography to the world. Since publication of the International Encyclopedia of Human Geography in 2009 much has changed in the field. Our world is more diverse, multicultural, and multinational. The new edition embraces this diversity by design, and captures the ways in which humans share places, as well as the differences - according to gender, race, nationality, location and other factors - that make people and places different. Questions of, for example, politics, economics, race relations, and migration, are introduced and discussed through a geographical lens. The first edition was celebrated as providing an authoritative overview of all aspects of the field, covering wide-ranging topics across social sciences. The second edition sees an enhanced focus on key areas such as population, nature/environment and social, cultural and political geography. Once again it will assist the audience in their research by providing factual information, historical perspective, theoretical approaches, reviews of the literature, and provocative topical discussion to stimulate creative thinking. Ultimately, this second edition will ensure readers gain a better understanding of the issues of a diverse world via the tools of human geography. The International Encyclopedia of Human Geography, Second Edition, is an easily accessible, interdisciplinary

and fully comprehensive source of information in what is a fascinating discipline of social science, and is essential reading for students, researchers, members of the media and public policy analysts interested in this subject. The most up-to-date and comprehensive coverage of human geography in one place Extensive scope and depth of coverage Emphasis on how geographers interact with, understand, and contribute to problem solving in the contemporary world and contemporary social problems Emphasis on how geography is relevant in a social and interdisciplinary context

An accessible, focused exploration of the field of political ecology The third edition of Political Ecology spans this sprawling field, using grounded examples and careful readings of current literature. While the study of political ecology is sometimes difficult to fathom, owing to its breadth and diversity, this resource simplifies the discussion by reducing the field down into a few core questions and arguments. These points clearly demonstrate how critical theory can make pragmatic contributions to the fields of conservation, development, and environmental management. The latest edition of this seminal work is also more closely focused, with references to recent work from around the world. Further, Political Ecology raises critical questions about "traditional" approaches to environmental questions and problems. This new edition: Includes international work in the field coming out of Europe, Latin America, and Asia Explains political ecology and its tendency to disrupt the environmental research and practice by both advancing and undermining associated fields of study Contains contributions from a wide range of diverse backgrounds and expertise Offers a resource that is written in highly-accessible, straightforward language Outlines the frontiers of the field and frames climate change and the end of population growth with the framework of political ecology An excellent resource for undergraduates and academics, the third edition of Political Ecology offers an updated edition of the guide to this diverse, quickly growing field that is at the heart of how humans shape the world and, in turn, are shaped by it.

"Develops a geographic approach to the politics of spectacle and its unspectacular Others through examining recent spectacular capital city development projects in seven authoritarian, resource-rich states of Central Asia, the Arabian Peninsula, and East Asia"--

Geography is a system of highly developed sciences about the environment. Geographical science embracing the study of the Earth's physical phenomena, people and their economic activities has always been in need of an extensive terminology. Geographical terms are related to the terms of natural sciences (physics, chemistry, biology, geology, etc.) and humanities (history, economics, sociology, etc.) since geography is based on these fundamental subjects. Geography includes a number of disciplines and subdivisions which appeared along with the development of the science In spite of being very different geographical disciplines have some common tools of investigation which is maps, comparative method of exploration, remote sensing, geoinformation systems. Today very well developed terminologies of all the specialist fields of geography and related subjects exist in the main world languages. However, they are not always well-correlated. Nowadays geographical terminology requires unification and international correlation more than ever before. Hence the idea of compiling a multilingual polydisciplinary dictionary. The Dictionary consists of the basic table of terms arranged according to the order of the English alphabet with each term numbered. Each entry consists of the term in English and its equivalents in Russian, French, German, Spanish. Short definitions of terms are given in English and in Russian. The terms are supplied with the necessary grammar labels, such as gender of nouns, plural number, etc. The Dictionary combines two functions: that of a defining dictionary and that of a bilingual dictionary. These two

functions are basically contradictory because usually the defining dictionary is aimed at giving one meaning of the word which is the main and essential one, while the bilingual dictionary tries to give different equivalents of a given word in the other language in order to supply the user with maximum possible translations, differing in the shades of meanings, thus giving him the possibility to choose the appropriate word. But in our Dictionary we intentionally decided to combine the two functions – defining and multilingual, because a short definition of the term and equivalents in other languages help to achieve our main aim which consists in showing the basic geographical terminology and harmonizing it in several languages. Having this into consideration we deliberately mixed two types of dictionaries in one. Organized alphabetically via English Provides short definition of geographical terms in English and Russian Includes multilingual translation of terms from English to Russian, French, German, Spanish

This edited volume explores how a feminist political ecology framework can bring fresh insights to the study of rural and urban livelihoods dependent on vulnerable rivers, lakes, watersheds, wetlands and coastal environments. Bringing together political ecologists and feminist scholars from multiple disciplines, the book develops solution-oriented advances to theory, policy and planning to tackle the complexity of these global environmental changes. Using applied research on the contemporary management of groundwater, springs, rivers, lakes, watersheds and coastal wetlands in Central and South Asia, Northern, Central and Southern Africa, and South and North America, the authors draw on a variety of methodological perspectives and new theoretical approaches to demonstrate the importance of considering multiple layers of social difference as produced by and central to the effective governance and local management of water resources. This unique collection employs a unifying feminist political ecology framework that emphasizes the ways that gender interacts with other social and geographical locations of water resource users. In doing so, the book further questions the normative gender discourses that underlie policies and practices surrounding rural and urban water management and climate change, water pollution, large-scale development and dams, water for crop and livestock production and processing, resource knowledge and expertise, and critical livelihood studies. This book will be of interest to students and scholars of environmental studies, development studies, feminist and environmental geography, anthropology, sociology, environmental philosophy, public policy, planning, media studies, Latin American and other area studies, as well as women's and gender studies.

We now find ourselves in a new geological age: the Anthropocene. The climate is changing and species are disappearing at a rate not seen since Earth's major extinctions. The rapid, large-scale changes caused by fossil-fuel powered globalization increasingly threaten societies in new, unforeseen ways. But most security policies continue to be built on notions that look backward to a time when geopolitical threats derived mainly from the rivalries of states with fixed boundaries. Instead, Anthropocene Geopolitics shows that security policy must look forward to quickly shape a sustainable world no longer dependent on fossil fuels. A future of long-term peace and geopolitical security depends on keeping the earth in conditions roughly similar to those we have known throughout history. Minimizing disruptions that would further put civilization at risk of extinction urgently requires policies that reflect new Anthropocene –planetary boundaries.– This book is published in English. - Depuis la fin de la dernière période glaciaire, l'humanité a transformé sa niche écologique, modifié sa position dans l'écosystème, provoqué des changements climatiques radicaux et affecté la diversité des espèces aux quatre coins du monde, ce qui a entraîné l'apparition d'une nouvelle époque géologique, l'Anthropocène. À l'échelle planétaire, les activités humaines exercent un impact

direct sur les frontières qu'elles transforment durablement alors que ces mêmes frontières ont constitué le cadre naturel dans lequel l'humanité a pu prospérer durant les dix derniers millénaires. Les changements rapides qui affectent notre système terrestre remettent directement en cause les anciennes hypothèses qui considéraient des frontières stables comme le principal fondement de la souveraineté. Aujourd'hui, ces postulats périmés doivent impérativement être réévalués. Paradoxalement, la phase de mondialisation actuelle nécessite une redéfinition de la notion même de frontières stables. En effet, l'élargissement des droits de propriété et des champs de compétence pourrait en fait prévenir la mise en œuvre de mesures d'adaptation efficaces visant à répondre aux enjeux du changement climatique. Garantir la survie d'une économie fondée sur la consommation de combustibles fossiles demeure à ce jour une priorité politique comme le fait de devoir faire face aux catastrophes naturelles à l'échelle mondiale – ce qui rend les objectifs de durabilité d'autant plus difficiles à atteindre dans un environnement en pleine mutation où les rivalités politiques exacerbées façonnent la politique globale contemporaine. L'entrée de la Terre dans une nouvelle époque géologique, l'Anthropocène (l'ère de l'homme), représente un formidable défi éthique, qu'il convient de relever en établissant une véritable politique de durabilité, et ce, au moment où l'humanité s'engage dans la dernière phase du processus de mondialisation. Dans un tel contexte, pour être réellement efficaces, les connaissances et les perspectives résultant des analyses académiques et des initiatives pratiques de toute nature devront être intégrées dans une vision globale.

Severe droughts, damaging floods and mass migration: Climate change is becoming a focal point for security and conflict research and a challenge for the world's governance structures. But how severe are the security risks and conflict potentials of climate change? Could global warming trigger a sequence of events leading to economic decline, social unrest and political instability? What are the causal relationships between resource scarcity and violent conflict? This book brings together international experts to explore these questions using in-depth case studies from around the world. Furthermore, the authors discuss strategies, institutions and cooperative approaches to stabilize the climate-society interaction.
