(R)Evolution studies the adaptation of industrial organisations to the dynamics of the environment by drawing an analogy with evolutionary biology, by extensively studying literature in management science, and by case studies. These investigations have lead to the insight that companies might evolve slower than generally expected; they doubt the effect of reorganizations, as commonly practiced in industry. Additionally, this work proposes the model for the Innovation Impact Point, the model for the Dynamic Adaptation Capability, the model for Collaboration.

In A Theory of Environmental Leadership, Mark Manolopoulos draws on his original model of leading outlined in his cutting-edge book Following Reason to derive and develop the first properly systematic model of eco-leadership. Suppose humanity ’ s relation with the Earth may be described in terms of leadership "stages" or modalities: once upon a time, the Earth led or ruled humanity, and now we humans rule or lead the Earth. When the Earth led, the Earth flourished; now that humankind leads, the Earth flounders - ecological crises multiply and intensify. However, there might be a third stage or modality of leadership: humanity leading for the Earth, leading in a way that allows the world, including humans, to re-flourish. What would be the nature of this truly environmental form of leadership? A Theory of Environmental Leadership identifies and critically analyzes the two basic and incompatible positions associated with the way we construe and interact with the non-human: anthropocentrism (human supremacism) and ecocentrism (ecological egalitarianism). By rigorously analyzing and leveraging this polarity, this book outlines an innovative theory of eco-leadership together with some of its confronting-but-necessary measures. Expansive and incredibly timely, A Theory of Environmental Leadership is ideal for a range of audiences, from scholars and students of environmental leadership studies to activists and policymakers. The book ’ s remarkable clarity and engaging character also makes it suitable for the general public.

Organization Theory offers a clear and comprehensive introduction to the study of organizations and organizing processes. It encourages an even-handed appreciation of the main perspectives defining our knowledge of organizations and challenges readers to broaden their intellectual reach. Organization Theory is presented in three parts: Part I introduces the reader to theorizing using the multi-perspective approach. Part II presents different core concepts useful for analysing and understanding organizations - as entities within an environment, as social structures, technologies, cultures and physical structures, and as the products of power and political processes. Part III explores applications of organization theory to the practical matters of organizational design and change, and introduces the latest ideas, including organizational identity theory, process and practice theories, and aesthetics. An account of the movement for sustainable development in Ecuador through four eras: movement origins, neoliberal boom, neoliberal bust, and citizens' revolution. Ecuador is biologically diverse, petroleum rich, and economically poor. Its extraordinary biodiversity has attracted attention and funding from such transnational environmental organizations as Conservation International, the World Wildlife Fund, and the United States Agency for International

Development. In Ecuador itself there are more than 200 environmental groups dedicated to sustainable development, and the country's 2008 constitution grants constitutional rights to nature. The current leftist government is committed both to lifting its people out of poverty and pursuing sustainable development, but petroleum extraction is Ecuador's leading source of revenue. While extraction generates economic growth, which supports the state's social welfare agenda, it also causes environmental destruction. Given these competing concerns, will Ecuador be able to achieve sustainability? In this book, Tammy Lewis examines the movement for sustainable development in Ecuador through four eras: movement origins (1978 to 1987), neoliberal boom (1987 to 2000), neoliberal bust (2000 to 2006), and citizens' revolution (2006 to 2015). Lewis presents a typology of Ecuador's environmental organizations: ecoimperialists, transnational environmentalists from other countries; ecodependents, national groups that partner with transnational groups; and ecoresisters, home-grown environmentalists who reject the dominant development paradigm. She examines the interplay of transnational funding, the Ecuadorian environmental movement, and the state's environmental and development policies. Along the way, addressing literatures in environmental sociology, social movements, and development studies, she explores what configuration of forces—political, economic, and environmental—is most likely to lead to a sustainable balance between the social system and the ecosystem.

This volume from the Policy Studies Organization provides critical, theoretical, and empirical perspectives on international organizations, the policy implications of these organizations, and the possible roles such agencies can play in international environmental policy. With contributions from a wide range of scholars, the work takes up such topical issues as the Rio Agenda of 1992 and its implementation; the role the European Union might play in environmental policy; the place of environmentalism in the development strategies and tactics of organizations such as the World Bank; and the development of international environmental law.

Published in 1998. In the past year the 300 largest global companies increased their research budgets by an average of 12 per cent. Governments now measure how technologically advanced they are as they worry about their trade balances and unemployment. Many public sector organizations, for example hospitals, universities and welfare agencies, are struggling to keep up with the rate of technological progress. The selections in this book provide a number of insights on how private firms can be more innovative and public sector organizations can keep up with rapid technological change. They emphasize both radical and incremental innovations and both product and process innovation. In particular the advanced manufacturing technologies so central to Piore and Sabel ' s ' Second Industrial Divide ' receive a great deal of attention. Finally, the consequences of innovation are the focus of the last section.

Institutional economics is a sociocultural discipline and policy science which draws on the idea that economies are best understood through an appreciation of history, real-world institutions, and socioeconomic interrelations. This book brings together leading institutionalists to examine the tradition ' s most essential perspectives and methods. The contributors to the book draw on a broad range of institutional thought from the classic work of Thorstein Veblen, John R. Commons, and Karl Polanyi, to the newer viewpoints of post-Keynesian institutionalism, feminist institutionalism, and environmental institutionalism. Methods range from frameworks used to analyze public policy and institutional change, to modes of analysis including myth busting, historically grounded narratives, and computer-based simulations. Each chapter surveys the origins, development, key features, applications, and frontiers of a particular viewpoint, framework, or mode of analysis. Due consideration is given to both strengths and weaknesses; and woven into the chapters is attention to core institutionalist concepts, including technology, institutions, culture, and complexity. The book provides economists with promising starting points for new research, students with contributions refreshingly in touch with the real world, and policymakers and social scientists with compelling reasons for engaging further with the institutionalist tradition.

MANAGEMENT, 12E includes several innovative pedagogical features to help students understand their management capabilities and learn what it's like to manage in an organization today. A New Manager Self-Test in each chapter provides students with further insight into how they would function in the real world of management. The Remember This bullet-point summaries at the end of each major chapter section give students a snapshot of the key points and concepts covered in that section. The end-of-chapter questions have been carefully revised to encourage critical thinking and application of chapter concepts, and Small Group Breakout exercises give students the opportunity to apply concepts while building teamwork skills. Ethical dilemmas, all-new end-of-chapter cases, and a fully updated set of On the Job video cases help students sharpen their diagnostic skills for management problem solving. The environment and contested notions of sustainability are increasingly topics of public interest, political debate, and legislation across the world. Environmental education journals now publish research from a wide variety of methodological traditions that show linkages between the environment, health, development, and education. The growth in scholarship makes this an opportune time to review and synthesize the knowledge base of the environmental education (EE) field. The purpose of this 51-chapter handbook is not only to illuminate the most important concepts, findings and theories that have been developed by EE research, but also to critically examine the historical progression of the field, its current debates and controversies, what is still missing from the EE research agenda, and where that agenda might be headed. Published for the American Educational Research Association (AERA).
