Hence this is a solution for every value of s and t . 2.

b. The equation is $2x+3y = 1$. If $x = s$ then $y = 1$

$3(1-2s)$ so this is one form of the general solution.

Also, if $y = t$ then $x = 1 - 2(1-3t)$ gives another form. 4.

Online Library Solution Manual

Given the equation $4x - 2y + 0z = 1$, take $y = s$ and $z = t$ and solve for x : $x = \frac{1}{4}(2s + 3)$. This is the general solution. 5. a.

Solutions

A basic principle of this section is that row operations do not affect the solution set of a linear system.

Begin with a simple augmented matrix for which the solution is obviously $(3, -2, -1)$, and then perform any
