## About | John Zink Hamworthy Combustion

As emissions standards for NO<sub>x</sub>, CO and other pollutants continue to become increasingly stringent, it's more important than ever to partner with experts who have a full range of capabilities in both combustion and post-combustion cleanup technologies.

## Products & Applications | John Zink Hamworthy Combustion

The John Zink Hamworthy Combustion TruLight Technology system provides High Energy ignition and flame rod type flame detection in a single compact solution. This unique integration of functions delivers reliable performance and simplifies installation and maintenance.

Zink Hamworthy Combustion examine industry applications such as process burners, boiler burners, process flares, thermal oxidizers, and vapor control. This volume builds on the concepts covered in the first two volumes and shows how they are used in combustion applications. The book also features a wealth of color illustrations, photographs, and tables throughout. What's New in This Edition

- Expanded to three volumes, with Volume 3 focusing on important industry applications
- Extensive updates and revisions throughout, reflecting new standards, energy sources, processes, and conservation concerns
- Expanded coverage of flares and new coverage of biogas flares and flare gas recovery
- Information on vapor combustors
- Discussion of pollution control equipment
- Expanded coverage of commercial and utility boiler burners
- Chapters on process and air heaters
- More material on thermal

A Gallery of Combustion and Fire is the first book to provide a graphical perspective of the extremely visual phenomenon of combustion in full color. It is designed primarily to be used in parallel with, and supplement existing combustion textbooks that are usually in black and white, making it a challenge to visualize such a graphic phenomenon. Each image includes a description of how it was generated, which is detailed enough for the expert but simple enough for the novice. Processes range from small scale academic flames up to full scale industrial flames under a wide range of conditions such as low and normal gravity, atmospheric to high pressures, actual and simulated flames, and controlled and uncontrolled flames. Containing over 500 color images, with over 230 contributors from over 75 organizations, this volume is a
