hosting records, however, the internet also offers a unique platform on which we can host our research and lure in prospective cousins from around the world, to help build up a larger shared ancestral story. In *Sharing Your Family History Online*, genealogist and best-selling author Chris Paton will explore the many ways in which we can present our research and encourage collaboration online. Along the way, Chris Paton will also explore how we can make our research work further for us, by drawing in experts and distant cousins from around the world to help us break our ancestral brick walls, not just through sharing stories, but by accessing uniquely held documentation by family members around the world, including our very own shared DNA.

The internet is revolutionizing family history research. Every day new records and resources are placed online and new methods of sharing research and communicating across cyberspace become available. Never before has it been so easy to research family history and to gain a better understanding of who we are and where we came from. But, as Chris Paton demonstrates in this straightforward practical guide, while the internet is an enormous asset, it is also something to be wary of. Researchers need to take a cautious approach to the internet information they acquire. They need to ask, where did the original material come from and has it been accurately reproduced, why was it put online, what has been left out and what is still to come? As he leads the researcher through the multitude of resources that are now accessible online, Chris Paton helps to answer these questions. He shows what the internet can and cannot do, and he warns against the various traps researchers can fall into along the way.

According to the hundreds of emails and multiple great comments on my YouTube channel that I have received, people have been asking me the almost identical question, as to how would they go about tracing their family's genealogical background by records. Some of these people have stated that they have attempted to start their own research, but they tend to quit abruptly due to the lack of supporting instructions or directions as to where they should look next. Also, I took notice to many people stating that they have since researched the information and sources that I have previously presented, concerning those famously known genealogy DNA testing companies, who are blatantly and consistently producing fictitious test results, but promoting the results as if they are creditable and factual records of information, surrounding your actual genealogical historic background. When that is absolutely not true. Those constant contacts from people that I have received, led me to put together this very informative instructional reference book that will assist those in need of guidelines, as to how the beautiful journey of learning and researching one's historic background should go step by step from start to finish.
